Beretta Introduces MYNUTE EVO X: A Future-Oriented Efficient and Reliable Wall-Hung Condensing Boiler for Comfort at Your Fingertips

LEGNAGO, Italy, April 11, 2024 – Beretta is launching its range of MYNUTE EVO X™ wall-hung condensing boilers for residential properties, featuring several advances in terms of energy efficiency, reliability and performance. Beretta is a part of Carrier Global Corporation (NYSE: CARR), global leader in intelligent climate and energy solutions.

“When it comes to boilers for the residential segment, innovation and efficiency are at the heart of delivering highly effective yet affordable comfort for homeowners,” said Roberto Manzoni, Product Manager Heating Products, Carrier Global Comfort Solutions Europe, Beretta. “Extensively renewed in technology and design, MYNUTE EVO X features a number of important developments, from the wide 1:10 modulation ratio on all models and a modular, low-energy digital circulator for highly efficient operation, to the heat exchanger in stainless steel with renewed adaptive combustion system (ACC) and the new touch control, to list but a few.”

The extensively renewed electronic adaptive combustion control (ACC) can automatically adapt to the fuel type (natural gas, LPG and so on) without the need for

specific codes or accessory conversion kits. The ACC is also capable of self-diagnostics so that combustion is under control, with emissions consistently below regulatory limits. Further innovations include silent operation from just 45-48 db(A), while domestic hot water (DHW) comfort is also excellent thanks to a high-performance DHW heat exchanger developed in-house by Beretta. This highly effective system offers rapid set point attainment and temperature stability when drawing water.

The range comes with entirely renewed aesthetics, conveying a modern and evolved character to match the style and tone of different residential settings, both in new-build and retrofit applications. The new digital touchpad interface also features an eye-catching design. Developed with ease-of-use in mind, the control panel provides icon-based access to all boiler and system settings/parameters. Furthermore, MYNUTE EVO X is fully compatible with 'Hi, Comfort' IoT platform solutions, available as accessories, helping users to manage home comfort in an intuitive way via an app.

Like all new-generation Beretta boilers, MYNUTE EVO X is ready for the future: it can operate with blends of natural gas and hydrogen up to 20% that can be extended to 100% via a conversion kit currently under development. The new boiler series is also hybrid-ready to suit integration with Beretta's multi-energy systems.

The MYNUTE EVO X range of wall-hung condensing boilers consists of five easy-to-install and maintain models from 20 to 35 kW. A mix of heating-only and combi units, each model is the same compact size: even the 35 kW unit measures just 275 mm width. Beretta supplies all MYNUTE EVO X boilers in Forest Stewardship Council certified cardboard, which is recyclable, plastic-free packaging, as evidence of its commitment to a better environment for everyone.
