Beretta Launches the Exclusive EVO X: Peak Comfort and Performance in a New Premium Boiler

LEGNAGO, Italy, 17th June 2024 - Beretta announces the **Exclusive Evo X**, the new high-end wall-mounted condensing boiler that offers the highest levels of comfort and performance. The Exclusive Evo X marks a further step forward in the evolution of the Exclusive family and, like all latest-generation Beretta boilers, is IoT ready and pre-configured for use with natural gas and hydrogen blends up to 20%, looking towards the future. Beretta is part of Carrier Global Corporation (NYSE: CARR), global leader in intelligent climate and energy solutions that matter for people and our planet for generations to come.

The Exclusive Evo X stands out particularly for its wide 1:13 modulation range, which, by reducing the frequency of ignitions and shutdowns, contributes to high efficiency and reduced consumption. It also features a new stainless steel heat exchanger with fully revamped Active Combustion Control (ACC) that automatically adapts to the fuel type (methane, LPG, etc.) without the need for additional conversion kits.

Featuring an elegant and functional design with an advanced full-touch, color, horizontal interface, the Exclusive Evo X allows users to easily access product features in a modern and intuitive way, and an on-demand guided tour explains adjustments and settings, even supporting the less experienced user. The Exclusive Evo X achieves an A+ class in combination with the advanced thermostats Hi, Comfort T100 or Hi, Comfort T300, available as accessories. With Hi, Comfort T300 it is also possible to manage an entire hybrid system remotely, in a straightforward and intuitive manner, through a proprietary app. Thanks to its compact dimensions (740mmx275mmx420mm) and light weight (approximately 28-30kg) the Exclusive Evo X is easy to transport and install.

In terms of home comfort, it offers excellent operational quietness, ranging from 45 db to 48 db, a significant improvement over the previous Exclusive X range, making these new boilers ideal for indoor installation.

“The Exclusive Evo X represents the top of the range in our offering of wall-mounted boilers,” said Roberto Manzoni, Product Manager Heating Products, Carrier Global Comfort Solutions, Beretta. “Like all new-generation Beretta boilers, the Exclusive Evo X is future-proof and contributes to reducing environmental impact. It is in fact designed to operate with natural gas and hydrogen blends up to 20% and to achieve 100% through a conversion kit, currently under development. In terms of sustainability, it is testament to our ongoing commitment to pioneering smart climate and energy solutions,” Manzoni added.

All Beretta boilers are packaged in FSC-certified cardboard boxes (ensuring the paper comes from responsibly managed forests), which are completely recyclable, plastic-free and include the recyclability index of the boiler components.

Five models of the Exclusive EVO X are available: three combi and two heating-only, ranging from 25 to 35 kW, to meet various comfort requirements.
